To encourage energy efficient design in all building types, ASHRAE and its partnering organizations

Future guides, including one focused on warehouses to be published this spring, will be available for free.
"Energy efficiency is still a vast and underutilized energy resource that is essential to the long-term survival of our planet."
"The Illuminating Engineering Society of North America (IESNA) supports the electronic distribution of the guides."
In addition, the K-12 guide was sent to nearly 14,000 school systems around the country to assist with the implementation of energy efficiency programs.

Partnering organizations include the American Institute of Architects, the Illuminating Engineering Society, and the U.S. Green Building Council.
"Addressing energy use in our buildings is one of the most important measures we can take in our effort to reduce greenhouse gas emissions," said ASHRAE President Robert W. Wilson.

"The importance for all design and construction professionals to move toward carbon neutral, sustainable buildings is clear."

The guides provide a sensible, hands-on approach to design through use of products that are practical and available.

Hard copies of all of the guides are available for purchase. For more information, visit www.ashrae.org/freeguides

To order, contact ASHRAE Customer Service at 1-800-527-4723 (United States and Canada) or 404-638-2400 (International).
